- Next call 1/18 at 1 PM

Data Management

- Initial steps
 - Set up user accounts for remote access
 - Directory structure
 - File structure and naming conventions
 - QA/QC
 - Metadata/Documentation

Macrosystems Meeting, Boulder

“We are asking that up to four people from each of the 21 funded projects attend:

- The lead project PI (the recipients of this message)
- One co-PI from your project (who could be a lead PI on a collaborative part of your project)
- One person intimately involved with information management
- One participating junior faculty member or Post-Doc”

“The objectives of the meeting are to use your various experiences and perspectives to advance the development of MacroSystems Biology as a new field of scientific endeavor, provide assistance to other projects based on your own experiences, and provide input to the general community regarding the challenges and opportunities in this field.”

Here are the important action items for you at this point:

- Identify those people who will attend from your project and provide us their names and email addresses as soon as you can.
- Suggest agenda items for the meeting.
- Suggest formats for the various sessions.
- Nominate non-MSB participants (individuals, organizations)
- Volunteer for an organizing committee that will actually oversee the final conduct and progress of the meeting (Liz and I will be ex officio members); this will include organizing follow-up products.
